

## G503 WWII 1941 Willys MB Type I Radio Suppression

This article describes the Electrical Type I Filter Suppression Capacitor researched by Mark Tombleson. Mark's 1944 MB-NAVY-MZ-1 Radio Jeep is a terrific restoration project.

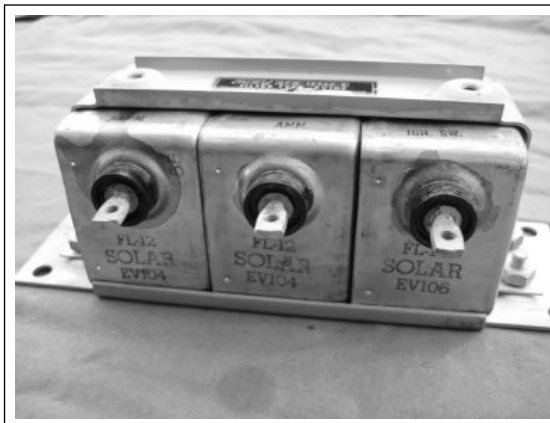

Nabholtz shows as Type I suppression ending in Dec 43 with MB serial # 289001. Here is a list of filters that you need for the Type I Suppression.  
**WO-A-1287** filter, mounted to dash side of voltage regulator

**WO-A-5337** filter unit, .1 MFD, generator ground to armature circuit mounts on the screw for the generator ground and attaches to the armature terminal of the generator.

**WO-A-1517** Filterette. This mounts under the glove box dash.

The internals of the filterette above are shown here. <br><br> Note: Manufacturers could be as follows :<br>-Early Tobe hinged <br>-Tobe <br>-Mallory <br>-Solar<br>-Sprague
